Chapter 8 Solving Linear Equations. DaVinci Goes Linear. A code is based on the linear equation $y = x + 3$. Assign a number to each letter in the alphabet. Calculate the corresponding value of y , and use it to replace the letter in a message. For example, if C is letter 3, the corresponding value of y is 6. So C becomes an F.

Teaching Textbooks

8.EE.C.7 Solve linear equations in one variable. a. Give examples of linear equations in one variable with one solution, infinitely many solutions, or no solutions. Show which of these possibilities is the case by successively transforming the given equation into simpler forms, until an equivalent equation of the form $x = a$, $a = a$, or $a = b$ results (where a and b are different numbers).
